Abstract—The omnipresent divine power of the universe, often referred to as God’s Power, exists eternally—neither created nor destroyed, but ever-pervading in the form of the supreme cosmic energy. Though invisible to the naked eye, this divine force manifests itself throughout creation, driving all forms of existence. Everything in the universe transforms from one form to another, yet the essence of divine energy remains unchanged and indestructible. It operates perpetually in its nirguna (formless) and nirvikara (immutable) state, performing the three fundamental roles of creation, sustenance, and destruction.

In the Bhagavad Gita (2.23), Lord Krishna explains: "Nainam chindanti shastrani, nainam dahati pavakah; Na chainam kledayantyapo, na shoshayati marutah."—The soul cannot be cut by weapons, burnt by fire, wetted by water, or dried by the wind.

Modern scientific endeavors, such as the creation of Artificial Suns by researchers in the United States and China, exemplify humanity’s attempt to replicate the divine process of creation and transformation. These artificial fusion systems symbolize a new era in energy generation—redefining how we perceive and harness power.

The Innovative Rainmaking Research Association (IRRA) proposes a Modified Law of Conservation of Energy, suggesting that:“Energy is created at a certain point, destroyed up to a certain limit, and conserved in between through transformation.”

Thus, energy—like divine power—exists within a cyclic continuum of creation, transformation, and dissolution. This paper introduces an innovative model for continuous energy generation through Underground Controlled Nuclear Fusion Plants (Mini Artificial Suns), aimed at sustainable multipurpose energy production for global use.

Index Terms—Law of Conservation; Energy Creation; Energy Conversion; Energy Destruction; Divine Power; Controlled Nuclear Fusion; Artificial Sun; Sustainable Energy.

I. INTRODUCTION

1.1. Background of the Invention

This invention presents a novel method for generating energy through controlled nuclear fusion reactions in an underground facility, conceptually termed a “Mini Artificial Sun.” The design is based on a reinterpretation of the Law of Conservation of Energy, extending its classical form to include the processes of energy creation and destruction within a closed universal cycle.

Traditionally, the law asserts that energy can neither be created nor destroyed but only transformed. However, IRRA scientists propose a Modified Law, recognizing that energy emerges at a specific point (creation), diminishes

Up to a limit (destruction), and undergoes transformation in between (conservation).

In this context, the Sun serves as a prime example—continuously producing energy through fusion without any external input. The Sun’s process of fusing hydrogen nuclei into helium releases immense energy—approximately

3.8×10^{26} watts—illustrating the principle of natural, self-sustaining creation. The present invention aims to replicate this phenomenon in a controlled underground system to generate clean and inexhaustible power.

II. OBJECTIVE OF THE INVENTION

To generate continuous and excess energy through underground controlled nuclear fusion plants (Mini Artificial Suns) for multipurpose use— industrial, residential, and agricultural—ensuring sustainability and environmental safety.

2.1. Summary of the Invention

The invention provides a method and system for generating renewable energy by replicating the Sun’s fusion process within a secured underground chamber. The plant, located deep beneath the earth’s surface, ensures natural radiation shielding and structural stability.

Hydrogen nuclei are fused to form helium, releasing substantial energy. This energy is captured and transferred to an underground transformer unit, which converts it into usable electricity. The energy is then distributed for diverse applications:

- Industrial power supply
- Residential and commercial electricity
- Agricultural operations and irrigation

An underground maintenance home, connected via a secure passage, houses automated robotic systems and computer-controlled monitoring for efficient operation and maintenance. This ensures continuous, risk-free energy production.

2.2. Detailed Description of the Invention:

Before explaining in detail, a plurality of embodiments of the invention, it should be clarified that the invention is not limited in its application to the construction details and configuration of components presented in the following description or illustrated in the drawings. The invention may assume other embodiments and be implemented or constructed in practice in different ways. It should be understood that the phraseology and terminology have a descriptive purpose and should not be understood as limiting. The use of “comprise” and “include” and their variations is to be understood as encompassing the elements set out below and their equivalents, as well as additional elements and the equivalents thereof.

We know well that the human body is made up of five principles (Punctuative): sky, wind, water, earth, and fire. These five principles, which constitute our Living body in solid form, culminate in the human body. In this Living body, God’s power is present in the form of soul power, and only then do the activities of the body—e.g., walking, eating, speaking, and breathing—occur. When the soul is present in the Living body, the body performs all activities. But when a Living being dies, the soul disappears from the body. No sooner does it leave the human body; the physical activities are stunted.

But do you know why it does not work? Our eyes, hands, mouth, and every part of the human body are still there, but the body does not function without the soul. Why? The soul is vital for the human body, as it enables the body to walk, eat, speak, and function.

This is the same power that operates in the universal system, which can also be referred to as the Supreme God Power. This is a solemn effort to deliberate on the soul that is present in the human body. When the soul is present, the body functions; but when the human being dies, the soul departs and disappears. The moment it leaves, the physical activities stop abruptly.

But do you know why it does not work? The physical attributes of the human body remain, yet the body does not function without the soul. Why? The soul is essential to the human body, as it enables it to function

This is the same power that operates in the universal system, which can also be termed as the Supreme God Power. Pindi Te Cosmic (Yet Pinde Tat Bramhande).

The present invention relates to a method for generating energy through controlled nuclear fusion reactions (Mini artificial sun) in an underground plant. Referring to the accompanying drawing, the system is located beneath a mountain area to ensure natural shielding and stability.

2.3. Detailed Experimental Description of the Invention:

The underground fusion chamber—constructed approximately 200 meters below the surface—acts as the central hub for controlled nuclear fusion. The chamber, about 200 meters in diameter and 150 meters deep, is designed to withstand extreme conditions and ensure radiation containment.

The process mimics solar fusion by combining hydrogen atoms into helium, releasing high-energy plasma. The resultant energy is channeled through an energy transformer and distribution unit, which delivers it to various sectors. The underground design not only ensures natural safety but also minimizes environmental disruption and maximizes energy efficiency.

This process draws parallels between cosmic and human energy systems. Just as the soul animates the human body—without which life ceases—the Supreme Energy sustains the universe. The same eternal power, when scientifically harnessed, can illuminate human civilization through sustainable fusion energy.

1.4. Advantages of the Invention

1. Provides a clean, safe, and inexhaustible energy source.
2. Minimizes environmental and radiation risks through underground containment.
3. Enables large-scale, continuous power generation.
4. Offers multipurpose applications across industry, agriculture, and domestic sectors.
5. Embodies the philosophical and scientific unity of divine power and physical energy transformation.

1.0 Practical Experiments

III. CONCLUSIONS

The proposed method of generating additional energy through continuous underground controlled nuclear fusion plants (Mini Artificial Sun) demonstrates an innovative approach to sustainable energy production. By replicating the Sun's natural fusion process within a secure subterranean environment, this invention provides a continuous and clean source of power for multipurpose applications—industrial, agricultural, and residential. The model underscores the principle that energy creation, transformation, and conservation coexist within a unified cycle, aligning both scientific understanding and divine philosophy of universal energy.

IV. ACKNOWLEDGEMENT

The authors express their sincere gratitude to several eminent scientists and contributors for their valuable insights and guidance. Special thanks are extended to Dr. D. K. Chakrabarty and Dr. K. R. Gangakhedkar, P. N. College, Nanded, for their encouragement and scientific suggestions. The authors also acknowledge Dr. (Mrs.) Sumanlatha Pandey for her thoughtful review and editorial support of the original manuscript, and Mrs. Vinaya Dabir, Doctor Colony, Sewagram, Maharashtra, India, for her continued assistance and cooperation.

As described by IRRA Scientists, the Modified Law of Conservation asserts that:
“Energy is created at a certain point and destroyed up to a certain limit; between creation and destruction lies conservation—the transformation of one form of energy into another.”
This has now been practically demonstrated in laboratories by American and Chinese scientists (as of August 2, 2023).
